01 User query
Natural-language request with numbers
02 Extract quantities
Normalize formats; preserve units and source spans
03 Formulate computation
Choose the equation and check semantic intent
04 Execute deterministic tool
Calculator, Python, database or verifier
05 Verify result
Check equation, units and source consistency
06 Final response
Explain the result and remaining uncertainty
RG remains essential
Extract the correct values and formulate the intended computation.
Delegate arithmetic
Deterministic execution requires valid inputs and independent checks.
